Hassan Amin

Software Engineer | React.js & Node.js | Full-Stack Development

hassanamin.6007@gmail.com +92 325 8083296 Lahore, Pakistan LinkedIn Portfolio GitHub

Professional Summary

CS graduate from FAST-NU Lahore with a strong foundation in Object-Oriented Programming, Data Structures, and Algorithms, combined with hands-on full-stack development experience – from responsive React.js interfaces to Node.js/Express REST APIs and relational database design. Brings production experience as the sole frontend engineer on a 5-person founding team at a US-based EdTech startup, delivering real features to real users in a fast-moving remote environment. Comfortable moving fast, learning on the job, and owning work end to end.

Professional Experience

Junior Software Developer – Groqify Inc. *Remote (United States) | Aug 2026 – Sep 2026*

- Conducted end-to-end testing across the platform's frontend and backend to identify bugs and usability improvements.
- Worked across the full stack – frontend, backend, and database – to investigate and resolve issues surfaced during testing.
- Collaborated with the founding team on both technical fixes and cross-functional growth initiatives as needed.

Software Engineering Intern – Groqify Inc. *Remote (United States) | Jun 2025 – Aug 2025*

- Served as the sole frontend engineer in a 5-person founding team, working directly with co-founders to architect and ship a corporate training platform from the ground up.
- Built responsive interfaces using React.js and Tailwind CSS, delivering interactive learning modules across multi-user training sessions.
- Led 30+ participant user testing sessions, translating feedback into iterative UI/UX improvements that shaped the production product.
- Collaborated with the lead engineer to implement Redux for global state management, ensuring data consistency across complex concurrent training sessions.
- Integrated Cursor AI into the sprint workflow, estimating a 30% reduction in feature delivery time across the internship.

Product Engineering Intern – Edkasa *Lahore, Pakistan | Jun 2024 – Jul 2024*

- Researched 5 emerging EdTech tools for potential platform integration; findings directly influenced the team's adoption decision, with 1 tool shortlisted for production use.
- Independently led research and prepared presentation materials for a partnership and academic collaboration meeting at LUMS, attending alongside company CEOs as the sole intern, onboarding across multiple Agile sprint cycles.

Technical Skills

Core Fundamentals: Object-Oriented Programming, Data Structures & Algorithms (C++, Java)
Languages & Frameworks: JavaScript (ES6+), Python, C, C++, Java, React.js, Node.js, Express.js, HTML5, Tailwind CSS
Databases: SQL (MySQL, PostgreSQL), NoSQL
AI & Automation: n8n, Google Gemini API, Cursor AI, LLM-Assisted Development, Prompt Engineering
State & Testing: Redux, React Testing Library, Unit Testing
Design & Workflow: Figma, Git, GitHub, Agile/Scrum, Remote Collaboration

Education

National University of Computer and Emerging Sciences (FAST) – Lahore *Sep 2021 – Jan 2026*
BS in Computer Science

FSc Pre-Engineering – Garrison College | Matriculation – Cathedral School *2017 – 2021*

Technical Projects

Movie Search – Full-Stack Web App

- Built a full-stack movie discovery app with a React/Vite frontend and a Node.js/Express REST API, integrating the TMDB API for live search and detail views.
- Designed a relational PostgreSQL schema (Supabase) with foreign-key constraints for persistent favorites, structuring the backend with MVC-style separation (routes, controllers, middleware) and environment-based secrets management.

Job Fit Analyzer – AI Agent

- Built an AI agent using n8n and the Google Gemini API that analyzes job postings against my technical background, returning a fit score, honest skill gaps, and a draft outreach message.
- Designed the full workflow end to end – a public form trigger, LLM-based analysis, and a dynamic response page – and used it throughout my own job search.

Prayer Tracker – Android App (Flutter)

- Built a Flutter Android app with a month calendar and daily prayer tracking, calculating prayer times on-device and locking prayers that are not yet due.
- Implemented a home-screen widget with tap-to-mark actions, scheduled notifications and azaan audio reminders that persist across restarts, and a Kotlin/XML Android integration layer.
- Developed using AI-assisted workflows (Claude) and tested on a physical device over USB.

Certifications

CS50x: Introduction to Computer Science – Harvard University, via edX *Jan 2025*
FSPC Coding Competition – FAST-NUCES Lahore *Apr 2024*
